

Technique Can See Damaged Proteins in Membranes

Written by Administrator

Monday, 20 December 2010 22:00 - Last Updated Monday, 20 December 2010 22:00

Whenever proteins in the cellular membrane are destroyed, researchers need to let them go, and begin searching for other viable populations to conduct their studies on. But this is not true with an observations technique called X-ray Free-Electron Lasers (XFEL).
